

TouchTone BusinessFlex SIP Trunking Phone Service

**Unlimited Local & Long Distance
only \$34.99 per SIP line!**

BusinessFlex is a powerful Voice over IP solution that helps businesses to simplify, consolidate, and manage their voice services and costs. It is a perfect solution for higher volume customers who already have high speed Internet and an existing phone system that are looking to replace their traditional phone service or T1/PRI.

SIP offers a better utilization of the Internet because it combines voice and data traffic on a single network. Calls are routed through the Internet rather than the PSTN (Public Switched Telephone Network), eliminating the need for costly dedicated voice T-1/PRI circuits and the expensive telecom services that go along with them.

A completely scalable solution, subscribers can purchase as many, or as few, trunks (or phone lines) as they need to match their communication needs. Trunks can be added and removed as needed saving both time and money.

For example, three locations that would normally require three separate T1s can aggregate their voice traffic behind one SIP group that consists of 30 SIP trunks, **saving an estimated \$600 a month**. Plus, there are no calling restrictions!

We'll save you money. We'll show you how.

Call 800.266.4006 today to speak with a VoIP specialist.

**Save up to 60% by switching!
No contract term required.
Service available within 24 hours.
Nationwide footprint.**

How BusinessFlex SIP Trunking Works

Easy to use, even easier on the wallet!

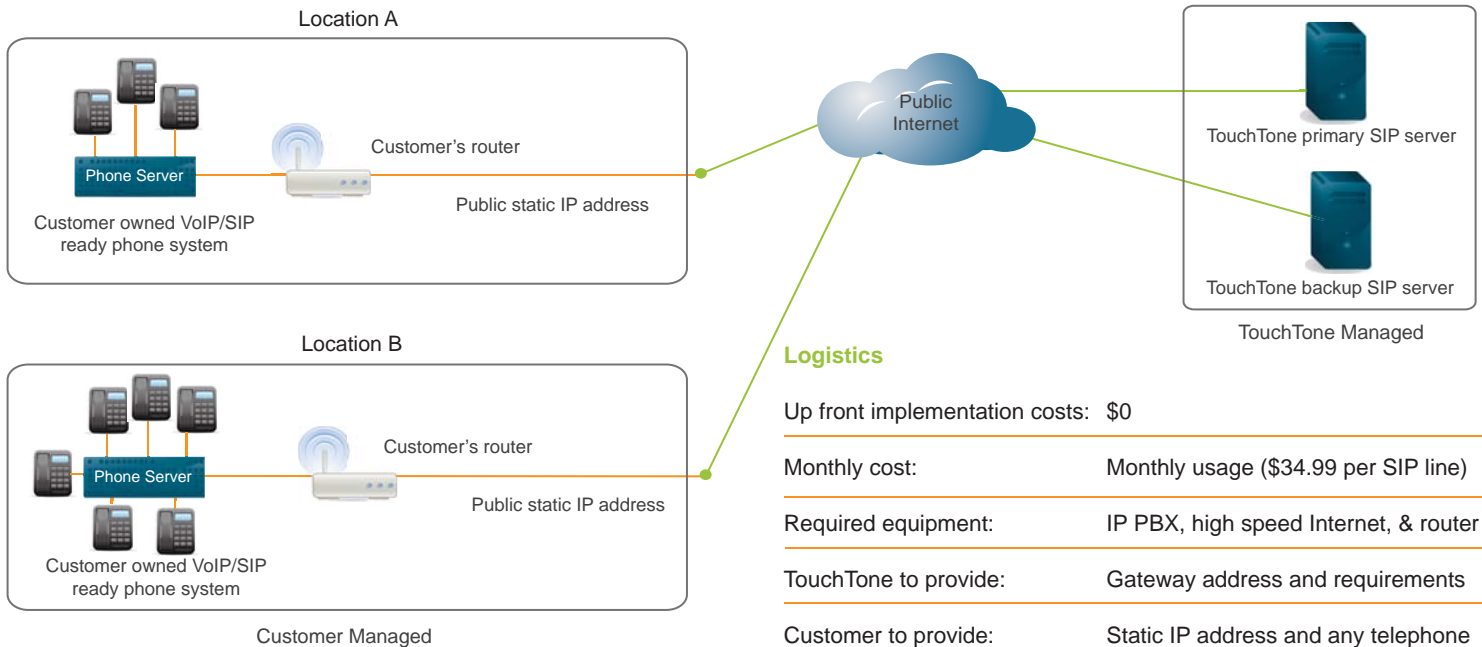

Switching is easy - use existing equipment!

No additional hardware, equipment, or technical expertise is required. BusinessFlex works with most SIP compatible phone systems and gateways, allowing customers to leverage the features and functions of their current PBX.

Manage costs and streamline communication

SIP offers a better utilization of the Internet because it combines voice and data traffic on a single network. Calls are routed through the Internet rather than the PSTN (Public Switched Telephone Network), eliminating the need for costly dedicated voice T-1/PRI circuits and the expensive telecom services that go along with them. SIP technology enables locations to share unused call capacity across an enterprise. Users can manage costs by merging multi-location businesses behind a single SIP trunk group.
